

## **Battery Vacuum Excavator**

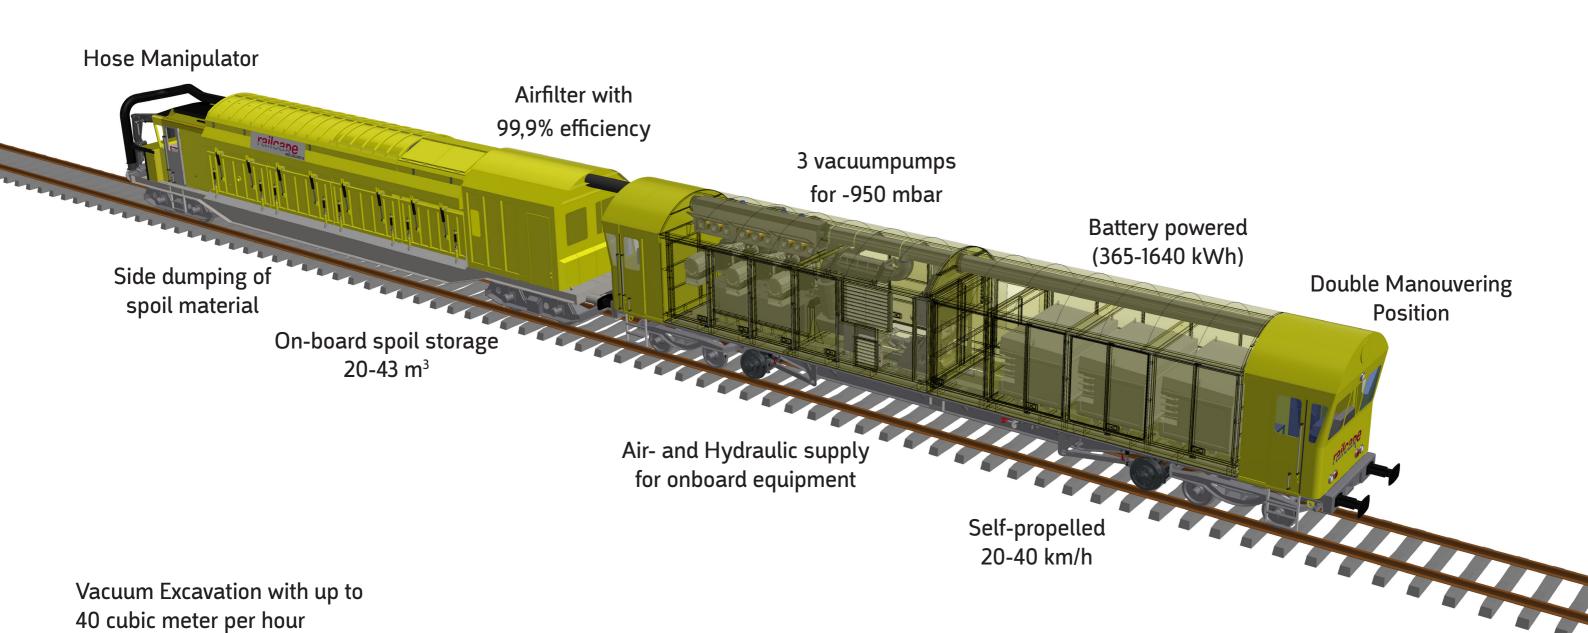

Zero Emissions
Optimal for Tunnels & Mines

## Worlds first battery vacuum excavator with 1100 kWh

- Zero diesel particulate matter
- Zero toxic gases
- Reduced heat and noise

without disturbing the track

## Developed in cooperation with Epiroc, ABB and Northvolt.

A large amount of our activities involve work underground and in urban environments. Here, if you work with diesel engines, you encounter a lot of issues with noise and exhaust emissions that can be tackled through electrifying the systems.

By introducing a successful concept in this area, we set a new standard in technology and sustainable thinking within the industry. This is the future for railway industry machines.
